

Project Description: Rob the Block

Overview

Rob used to be a software developer but then A.I. robbed Rob of his job so he became a robber. Rob has picked a block and his objective is to go from house to house stealing valuables without getting caught. Rob must not make noise, avoid the homeowners and their pets, collect items and exit to move on to the next house.

Game Mechanics

Rob can move in 4 directions and he cannot go through walls. Some doors might be locked which might open up later.

- Win Condition: Collect a specific point threshold and reach the exit tile.
- Lose Condition: Collide with a moving enemy OR the total score reaches zero.

Enemies

Rob must avoid enemies at all costs or he will be arrested and the game will finish.

- The Homeowner: A moving enemy that patrols a random path at random times. Contact results in immediate failure.
- The Watchdog: Idle by default. The dog investigates and chases the source of "noise" if the player triggers a specific hazard.

Punishments (Hazards)

- Garbage: Items like chip bags or cans. Stepping on them creates noise, which attracts the Watchdog.
- Water Puddle: A slipping hazard. Stepping here instantly deducts points from the player's score.

Rewards

- Regular Rewards: Standard household items scattered across the map. Different items yield different point values.
- Bonus Rewards: High-value items (e.g., inside a safe). These may appear temporarily when a safe is opened or at random intervals.
